Clone distribution: MGC clone distribution information can be found
```

Clone distribution: MGC clone distribution information can be found through the I.M.A.G.B. Consortium/LIMI at: http://image.llnl.gov Series: IRAK Plate: 96 Row: j Column: 22 This clone was selected for full length sequencing because it passed the following selection criteria: Similarity but not identity to protein This clone has the following problem: retained intron.

New polynucleotides encoding full-length polypeptides, e.g. secretory and/or membrane proteins, useful for developing medicines for diseases which the gene is involved, or as target molecules for gene therapy. ij

Claim 14; SEQ ID NO 2713; 205pp; English.

The present invention relates to novel human secretory or membrane proteins (ADA54072-ADA55710) and their coding sequences (ADA52433-ADA54071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.

This invention relates to a novel modulators that alter the interaction between the Ewing sarcoma protein (EWS) and its nuclear receptor, as well as the screening method thereof. Specifically, it refers to determining and identifying a hormonal effect brought about by test compounds that modulate either the binding of EWS to the nuclear receptor or the ligand-
                                                                                                                                                                                                                                                                                                                                                                                                                                                              human; Ewing hypogonadism;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       induced activity of this receptor. The present invention describes the nuclear receptors as including oestrogen, progesterone, thyroid hormone, Vitamin D, and retinoic acid receptors most preferably they are androgen receptors. Accordingly, these modulators may be used in the development of pharmaceutical compositions that can diagnose and be used to treat diseases associated with receptor dysfunction such as prostatic cancer, alopecia, acne, hypogonadism and androgen-resistance syndrome e.g. testicular feminisation. This method provides reliable, sensitive, simple, inexpensive and rapid assessment of the hormonal effects of these test compounds. This polypeptide sequence is the human Ewing sarcoma protein of the invention.

The TAT polypeptides are overexpressed in cancer tissues compared to normal tissues, and may thus serve as effective targets for the diagnosis and treatment of cancer in mammals. The invention also relates to nucleic acid and polypeptide sequences at least 80% identical to the TAT nucleic acids and comparising a TAT nucleic colypeptides, expression vectors and host cells comprising a TAT nucleic acid; an antibody specific for a TAT polypeptide; a peptide or organic collecule which binds to a TAT polypeptide; fusion proteins comprising a TAT nucleic acids, and methods and compositions for the treatment or collegency of cancer in mammals. TAT polypeptides, nucleic acids, antibodies, antagonists, binding molecules and compositions are useful for diagnosis of cancer in mammals. TAT polypeptides, nucleic acids with coloracteal cancer, lung cancer, ovarian cancers such as breast cancer, coloracteal cancer, lung cancer, ovarian cancer, liver cancer, bladder cancer, pancreatic cancer, cervical cancer, cancers of the central nervous system, melanoma and leukaemia. TAT nucleic acids may further be used as hybridisation probes, in chromosome and gene mapping, in chromosome identification and in gene therapy. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                  Local
                                                                                                                                                                                                                                                                                                                                                              probes 22RR3 and 22RR12 were used to screen a human foetal brain cDNA rary (Stratagene cat.# 936206). The clone BFLAC5 was identified and uenced. It represents the entire coding region and 3'-UTR of the Ews e. (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              닭
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
This invention relates to novel, isolated full length human cDNA CC molecules and the encoded proteins thereof. Specifically, it refers to CC cDNA clones obtained by an oligo-capting method, where none of these CC clones are identical to any known human mRNAs. The present invention CC describes an immunoassay to identify agonists and antagonists, as well as CC antibodies, antisense molecules and siRNAs that can all be used to bind CC entibodies, antisense molecules and siRNAs that can all be used to bind CC to and modulate expression of the CDNA molecules. As such, these CC molecules are useful for diagnostic markers or therapeutic targets for CC the various diseases or morbid states. In particular, they are useful in CC gene therapy for treating osteoporosis, neurological disease, Alzheimer's CC disease, Parkinson's disease, dementia, short memory and various cancers, as well as for maintaining equilibrium of sense or motor function, and CC for treating emotional reaction, fear response and panic. Accordingly, CC they exhibit osteopathic, neuroprotective, nootropic, antiparkinsonian, CC cytostatic and tranquiliser activities. This polypeptide is a protein CC encoded by a full length human cDNA sequence of the invention. NOTE: This

It shows homology to a novel human transcriptional activity factor, Tat-stimulatory factor (Tat-SF1, see AAW33811), that is involved in the regulation of transcriptional elongation of HIV-1 by Tat, is essential for Tat trans-activation and is a substrate of an associated cellular kinase. Tat-SF can be used to screen for binding agents useful in the treatment of HIV infection

conditions, comprising measuring the expression levels of particular genes (I) in a test sample or determining the expression profile of a gene group in the sample comprising genes selected from (I). The method is useful for examining the ischaemic condition (e.g. compressive schaemia, occlusive ischaemia or vasospastic ischaemia) by measuring expression levels of particular genes (ABI99202 to ABI99912, encoding the protein sequences in ABB57020 to ABB57374) or by determining the expression profile of a gene group comprising these genes. The expression levels or expression profiles produced by these genes are used as an indicator when screening for ischaemic condition improving drugs or therapeutics for ischaemic diseases. ABI99913 and ABI99914 represent PCR primers for a mouse ischaemic condition related sequence, which are used in the exemplification of the present invention
                                                                  immune response stimulation; antiallergic; antianaemic; antiarthri antiasthmatic; antidiabetic; antiinflammatory; antipsoriatic; antitheumatic; antithyroid; CNS; dermatological; gastrointestinal;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           뭐
         The invention relates to human tumour-associated antigenic target (TAT)

polypeptides, and their related nucleic acids. The TAT polypeptides are

overexpressed in cancer tissues compared to normal tissues, and may thus

serve as effective targets for the diagnosis and treatment of cancer in

mammals. The invention also relates to nucleic acid and polypeptide

sequences at least 80% identical to the TAT nucleic acids and

caid; an antibody specific for a TAT polypeptide; a peptide or organic

molecule which binds to a TAT polypeptide; fuelon proteins comprising a

TAT polypeptide; and methods and compositions for the treatment or

diagnosis of cancer in mammals. TAT polypeptides, nucleic acids,

antibodies, antagonists, binding molecules and compositions are useful

for diagnosis or treating a cell proliferative disporder associated with

increased TAT expression, particularly cancers such as breast cancer,

cancer, pancreatic cancer, overvina cancer, liver cancer, bladder

cancer, pancreatic cancer, overvina cancer, and gene mapping, in

nervous system, melanoma and leukaemia. TAT nucleic acids may further be

used as hybridisation probes, in chromosome and gene mapping, in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Tumour-associated antigenic target; TAT; human; overexpression; cumour; diagnosis; cell proliferative disorder; breast cancer; colorectal cancer; lung cancer; ovarian cancer; liver cancer; central nervous system cancer; bladder cancer; pancreatic cancer; cervical cancer; melanoma; leukaemia; hybridisation probe; chromosome identification; chromosome mapping; gene mapping;
                                                                                                                                                                                                                                                                                                                                                                                                  New tumor-associated antigenic target polypeptides and nucluseful in preparing a medicament for treating or detecting proliferative disorder, e.g. breast, lung, colorectal, ovar
                                                                                                                                                                                                                                                                                                                                                  Claim 12; SEQ ID NO 491; 7273pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               104
```

Treating genetically-defined disease associated with chromosomal aberrations yielding oncogenic fusion proteins, e.g. cell prolif diseases, involves administering an inhibitor of heat shock prot

cell proliferative shock protein 90.

administering HSP90-inhibitor. The method is useful for treating genetically-defined disease with chromosomal aberration yielding oncogenic fusion protein, treating cancerous cells containing fusion protein in heterogeneous cell population, treating proliferative disease (e.g. rheumatoid arthritis or cancer) associated with mutant protein or cellular protein isoform dependent on heat shock protein (HSP)-90 (e.g. p53), or selectively treating cells expressing mutant protein or cellular protein isoform in a patient heterozygous for (II). The method is useful for treating a disease e.g. haematopoletic disorder such as T or B cell lymphoma, chronic myeloid leukaemia (CML), APL, ALL, AML, NHL and CMML, or a disease characterised by a solid tumour such as papillary thyroid carcinoma, Ewing's sarcoma, melanoma, liposarcoma, rhabdomyosarcoma and synovial sarcoma. The method is also useful for treating viral infections. This represents a protein encoded by the DNA sequence of a The invention describes a method of treating genetically-defined disease associated with chromosomal aberrations yielding oncogenic fusion proteins (I), treating cancerous cells containing (I) in a heterogeneous cell population, treating proliferative diseases associated in the containing (I) and the containing containing treating proliferative diseases associated in the containing containing the containing contain pulation, treating proliferative diseases associated with mutant or cellular protein isoforms (II) dependent on heat shock protein 0, or selectively treating cells expressing (II) involving tering HSP90-inhibitor. The method is useful for treating aberration

This invention relates to the novel association of protein sequences (and CC the genes which encode them) to the NF-kappaB pathway. The invention may CC be useful for the production of compounds with an antiinflammatory, CC cytostatic, hepatotropic, virucide, antiarthritic, antiinflammatory, CC gastrointestinal-Gen, antiasthmatic, antiarteriosclerotic, cumunomodulator, cerebroprotective, vasotropic, immunosuppressive or vulnerary activity or for gene therapy. The proteins and nucleotides are useful for diagnosing, preventing, treating, or ameliorating conditions cor diseases associated with the NF-kappaB pathway. The condition is an immune disorder, an inflammatory disorder an inflammatory disorder an inflammatory disorder and immune disorder, hedgkin's lymphomas, haematopoietic tumours, hyper-IgM syndromes, hypohidrotic ectodermal dysplasia, x-linked anhidrotic cordermal responses, rheumatorid arthritis, inflammatory bowel disease, colitis, asthma, atherosclerosis, cachexia, euthyroid sick syndrome, stroke, EAE, autoimmune disorders, disorders related to hyper immune activity, disorders related to aberrant acute phase responses, corgan transplant rejection, conditions related to organ transplant corders, cancers and HIV propagation in cells infected with other viruses. The present sequence is that of a human protein which is subject to the novel association with the NF-kappaB pathway of the condition but was obtained by the indexer from Genbank.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated polynucleotides and polypeptides associated with NF-kappaB pathway, useful for diagnosing, treating, or preventing disorders or diseases associated with NF-kappaB pathway.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     aberrant acute phase response; hypercongenital condition; birth defect; necrotic lesion; wound; organ transplant rejection; aberrant signal transduction; proliferating disorder; cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     viral infection; HIV-1; HTLV-1; hepatitis B; hepatitis C; EBV; influenza; viral replication; host cell survival; evasion of immune response; rheumatoid arthritis; inflammatory bowel disease; colitis; asthma; atherosclerosis; cachexia; euthyroid sick syndrome; stroke; EAE; autoimmune disorder; hyper immune activity;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             14-JAN-2003; 2003US-0440068P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             뭐
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    श
                   The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation. The production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities,
                                                                                                                                                                                                                                                                                                                                                                                                   Tang

The method is useful for treating concogenic fusion protein, treating cancerous cells containing fusion protein, treating cancerous cells containing fusion protein in heterogeneous cell population, treating proliferative disease (e.g. rheumatoid arthritis or cancer) associated with mutant protein or cellular protein isoform dependent on heat shock protein (HSP)-90 (e.g. p33), or selectively treating cells expressing mutant protein or cellular protein isoform heterozygous for (II). The method is useful for treating a disease e.g. haematopoietic disorder such as T or B cell lymphoma, Chronic myeloid leukaemia (CML), APL, ALL, AML, NHL and CMML, or a disease characterised by a solid tumour such as T or B cell synovial sarcoma. The method is also useful for treating viral infections. This represents a protein encoded by the DNA sequence of a heavest of the contains and sequence of a province of the contains and sequence of a province of the contains and contains and contains and contains are contained to the contains and 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

The invention relates to a purified protein promoting signal transducer and activator of transcription 6 activation (STAT6). The protein is cuseful for the producing an antibody, which involves administering the protein or its epitope-bearing fragments to a non-human animal as an cantigen. The nucleic acid is useful for diagnosing a disease or compounds which inhibit or promote STAT6 activation. A transformant expressing the protein is useful for screening compounds which inhibit or promote STAT6 activation. A transformant composition is useful for producing a pharmaceutical composition. Compositions, antibodies and antisense molecules are useful for treating a disease associated with STAT6 activation such as allergic disease, inflammation, autoimmune diseases, diabetes, composition disease and cancers. Compositions are useful for treating disease associated with STAT6 activation and/or prevention of fhi hyperactive diseases. Compositions are also useful in rheumatoid carthritis, osteoarthritis, systemic lupus erythematosus, sepsis, asthma, composition of storation and and and and and are represented with storation are useful for treating and and and and and and are represented with storation are useful for treating and and and and and and are represented with storation are diseases. Compositions are also useful for screening compounds for treating and preventing disease associated with excessive activation or inhibition of STAT6. The present sequence represents the amino acid sequence of a human protein which promotes STAT6 activation.

 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
